

BigFix is a systems-management software product owned by HCL for managing large groups of computers. Using the BigFix plugin for Rapid7 InsightConnect, users can poll for actions, manage fixlets, computers, and more.

KEY FEATURES:

Create, delete, stop, and check the status of actions to your manage BigFix deployment.

List computers and get computer properties and settings to monitor your computer systems.

List, create, and delete computer groups to manage software deployment groups.

Fetch fixlets, fixlet information, matching fixlets, relevant fixlets, and computers which are relevant to a particular fixlet.

Query hosts and host inventory to search for operating systems, software, hostnames, IP addresses, and more.

Execute a query to get the result of a provided BigFix Relevance string

Execute a custom endpoint request to make a GET, POST, DELETE, or PUT request against a provided endpoint.

REQUIREMENTS:

- BigFix server URL and port number
- Administrative credentials
